

# IT Domain Architect for Business Project Management and Documentation

Mannheim (DEU), Bergamo (ITA), Västerås (SWE), Zürich (CHE) or Cary, NC (USA),

## Our Client

Our client is a pioneering technology leader that works closely with utility, industry, transportation and infrastructure customers to write the future of industrial digitalization and realize value. The Group of companies operates in around 100 countries and employs about 140 000 people.

The Group's Information Systems Delivery Center (ISDC) delivers IT application development and implementation projects as well as IT infrastructure services which support business processes for the global Group organization. Every day a team of over 400 developers, infrastructure experts, project managers and other specialists works on modern IT solutions which improve efficiency throughout our company. Currently we are looking for candidates to join our team for the position of Global Domain Architect for Business Project Management and Documentation applications.

The Global Domain Architect supports and aligns to the Group's business by developing, planning, driving, documenting and communicating the global business project management and documentation application architecture, solution portfolio and roadmap. The Global Domain Architect is the architectural design authority in the Group and ensures that all business project management and documentation components fit together from a technical and business perspective, also across other IT architectural domains such as engineering, manufacturing, etc. The Global Domain Architect also ensures that the Group takes advantage of new technology developments. Business project management covers the needs of the Group's units that deliver large engineering and construction projects to end-customers.

## Job Content

- Analyze and understand technology, innovation and market trends, and determine their potential impact relevance to our client.
- Oversee or consult on application architecture implementation and modification activities, particularly for new and/or shared business application solutions.
- Understand and apply business economic considerations to the (development of) target application architecture and roadmap
- Be regarded and act as an authority across the group in this area of expertise.
- Guide and coordinate the business application Solution Architects to ensure consensus based enterprise solutions that are aligned with business application architecture roadmap.
- Work closely together with all stakeholders regarding expectations, business and technical requirements, and in accordance with Group IT policies, procedures and guidelines.
- Enable the Group to invest in the right and appropriate business applications which help to standardize the IT environment, reduce operational cost and create value for the business.
- Direct or indirect involvement in the development of policies, standards and guidelines that steer the selection, development, implementation and use of business applications within the company.

- Contributes to enable full inter-operability between the various business application and infrastructure architecture domains.

## Requirements

- 10+ years of experience with business project management (e.g., engineering or construction projects) and documentation processes and applications, in particular:
  - Project (portfolio) management methodologies and solutions such as Primavera, Planisware, MS Project, Planview
  - Document, content management, publishing and archiving solutions
- Strong analytical skills and a deep understanding of the overall context of business processes and technologies
- Experience in leading IT people who do not report directly
- Capable of identifying and resolving issues between team members or other teams
- Able to translate business requirements into IT capabilities and solutions
- Experience in objectively evaluating solutions and making recommendations
- Experience in project planning and execution as well as economic aspects of system management and life cycle
- Degree in information management, computer systems, business engineering or similar
- Fluent spoken and written English

## Personal Attributes:

- Easy to work with, charismatic, good listener
- Can easily switch between understanding and looking at (or presenting) details versus taking a holistic view
- Is a respective leader, can motivate and persuade his/her team and stakeholders, pro-actively reaches out to stakeholders
- Puts team results in front of personal results
- Remains neutral and objective when it comes to analyzing facts and selecting solutions
- Motivated by long term results

## We offer:

- An interesting job in a company promoting innovative and modern technologies;
- Opportunity for professional development
- in an international environment and for increasing your abilities and skills in various areas;
- Employment in a stable company with an established position in the market;
- Attractive salary based on your professional experience and skills;
- Good working environment.
